

Two-side suction centrifugal fans of ВДНх2 type are designed for the stationary steam boilers furnace with 500-2650 t/h capacity. The use of this fan is allowable in ventilation installations. Maximum fan inlet air temperature should be under +100°C. The impeller blades are of airfoil section hollow type.

Fans are of left and right-hand rotation. The turn layout of the scroll case and inlet box is given in Fig.6. Technical features of the fans are shown in Figure 13 and Table 7.

**Figure 13. Q-Pv joint features of the standard ВДНх2 fans.
Recommended scopes of selection**

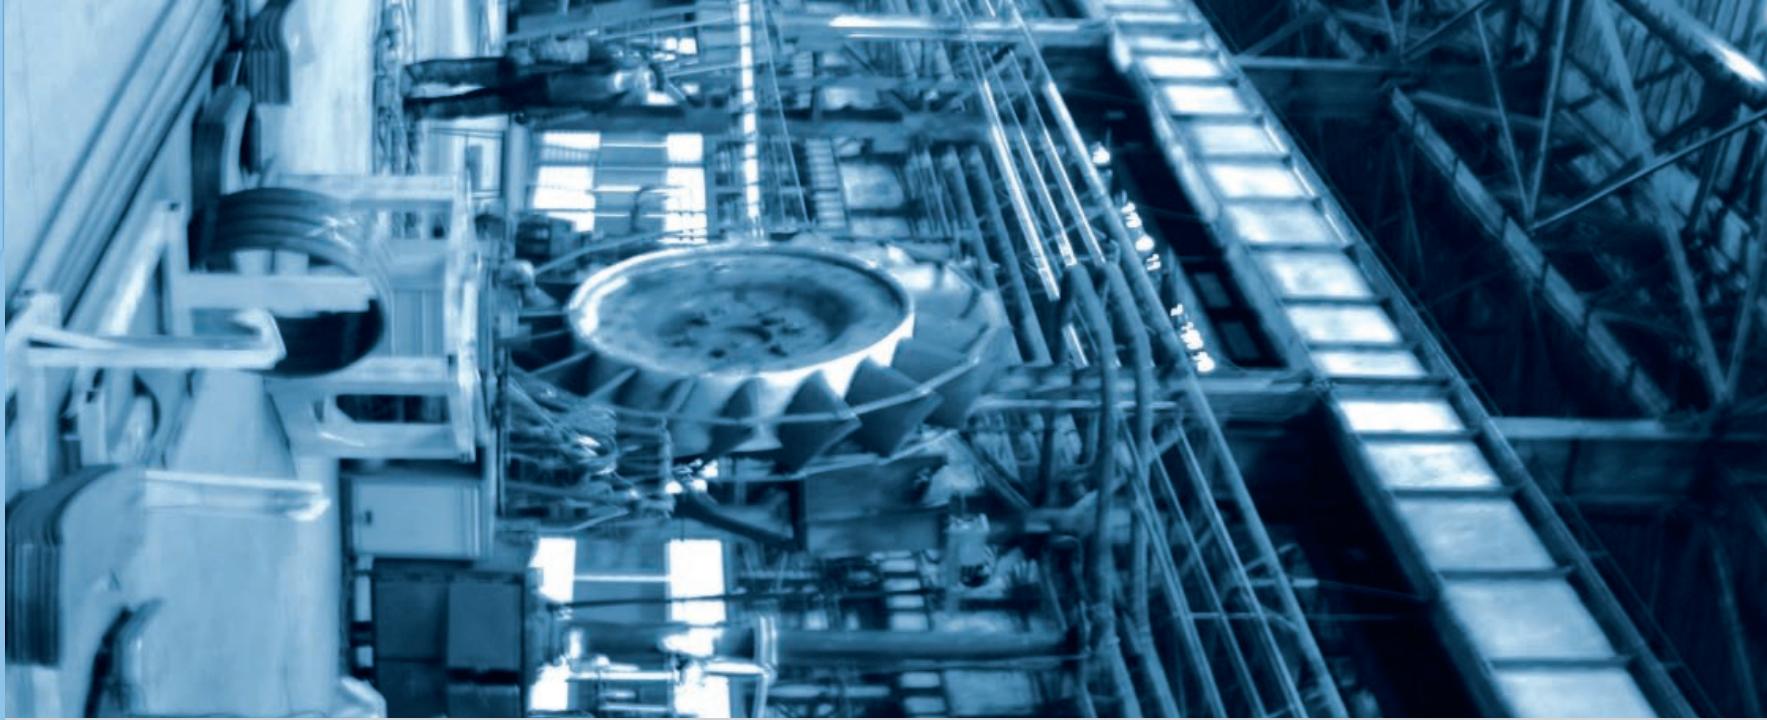

Table 7

№	Fan type	Rated inlet aerodynamic parameters under pressure 101300, temperature +30°C and air density 1.165 kg/m ³			Rotary speed rpm	Weight. Kg
		Capacity Q, th, m ³ /h	Total pressure Pv, Pa kgf/m ²	Maximum efficiency η_{max} , %		
1	ВДН-24x2МК	500	4380 (445)	86	750	20816
2	ВДН-25x2УК	300	4640 (473)	86	750	19610
3	ВДН-25x2МК	500	8240 (840)	87	1000	24560
